

Distribution box with lightning protection device for communication base station

What is a DC box?

The DC Box offers an exceptional power supply protection solution, featuring the single-pole type 1 surge protective device FLP25-DC75 (lightning current and surge arrester). This weather-resistant box is placed right at the base station outlet, effectively blocking partial lightning currents from infiltrating the system.

Why do cell sites need to be protected from lightning strikes?

Cell sites are essential for communication infrastructure and need to be shielded from power surges caused by lightning hits. A major concern for telecom operators is towers going offline due to lightning strikes, which often target the tallest structures in a region.

What is lightning & surge protection?

A thorough lightning and surge protection approach provides optimal safety for people and high availability systems. LSP designs specialized AC and DC Surge Protection Devices (SPDs) for mobile radio sites.

What is a cell site power supply?

In AC applications, cell site power supply is distinct from the building's, forming a separate supply line. Tested surge protective devices (lightning current and surge arresters) shield the main and system power supply infrastructure.

Why do I need a DC box?

The use of a DC Box allows for direct activation and deactivation of the active transmission system on the mast, eliminating the need to interrupt the power supply at the base. Moreover, the fuse status (on/off) is readily visible, providing installers with added certainty in practical applications.

Do mobile communication components need protection against lightning and overvoltage damage?

Mobile communication components, with their sensitivity and costliness in terms of procurement and upkeep, demand robust protection against lightning and overvoltage damage. A meticulously designed protection strategy is thus essential and advantageous in this context.

With CHARX protect, you can protect charging stations and electric cars against damage from surge voltage caused by lightning strikes or switching operations ...

The Littelfuse high-power TVS Diode Series, including the AK, LTKAK, SMTOAK2, and SMTAK3, are specifically designed for applications that require high energy transient voltage protection.

When the communication base station is struck by lightning, a very high overvoltage will appear on the top of pole, which leads the power supply cable of RRU (Remote Radio Unit) directly ...

Distribution box with lightning protection device for communication base station

In areas with frequent lightning strikes, electrical equipment is easily damaged by lightning strikes. To reduce the damage caused by lightning strikes, the surge protector in the ...

HYKL High Quality Distribution box 2P 25KA 420V Surge Protection Device is widely used in mobile communication base stations, microwave communication bureaus/stations, ...

Techwin 400KA TVSS with 20 years warranty is a class B surge protective device for AC power system. Can be used at communication base station, telecom ...

Techwin is a surge protection device manufacturer specialized in researching and producing all kinds of lightning protector products with 15 years of surge protection technology and ...

With the rapid development of the communications industry, microelectronic devices have been widely used, the integration of communications equipment is getting higher and higher, and its ...

The lightning arrester for the RuTian feeder is installed at the connection between the antenna and the feeder to prevent lightning from entering the main equipment of the base ...

This weather-resistant box is placed right at the base station outlet, effectively blocking partial lightning currents from infiltrating the system. With the coordinated lightning ...

By analyzing the lightning protection and grounding requirements of the respective systems of the communication base station and the power tower, the impact of the towers on ...

Techwin 400KA TVSS with 20 years warranty is a class B surge protective device for AC power system. Can be used at communication base station, telecom centers, automatic control ...

This product is applicable to low-voltage power supply and distribution system with power grid voltage below 1000V and frequency of 50/60Hz.

The invention discloses a communication base station lightning arrester capable of being automatically started according to meteorological conditions, which comprises a lightning ...

This product is widely used in mobile communication base stations, microwave communication bureau stations, telecommunications equipment rooms, industrial factories and mines, civil ...

This section describes the lightning protection and grounding requirements. Ensure that the equipment room meets the requirements because lightning is one of the major factors that ...

Distribution box with lightning protection device for communication base station

The station electrical, and to a lesser extent the RF, grounding system provide protection against hazards from equipment and lightning in the shack. However, the use of artificial grounding ...

Surge Protective Devices are designed to protect against transient surge conditions. Large single surge events, such as lightning, can reach hundreds of thousands of volts and can cause ...

The fireproof performance of the lightning protection box is better, which is especially important for unattended base stations. Some outdoor box displays and lightning ...

A technology for communication base stations and alarm equipment, which is applied in the direction of electric transmission signal system, electrical components, measuring devices, ...
