What is a battery energy storage system?

Battery energy storage systems (BESS) stabilize the electrical grid, ensuring a steady flow of power to homes and businesses regardless of fluctuations from varied energy sources or other disruptions. However, fires at some BESS installations have caused concern in communities considering BESS as a method to support their grids.

What happened at Gateway energy storage facility?

On May 15, 2024, Gateway Energy Storage Facility in San Diego, California, experienced a BESS fire with continued flare-ups for seven days following the fire. The facility held about 15,000 nickel manganese cobalt lithium-ion batteries.

Why did the board not consider a government policy on energy security?

The court found that the Board failed to consider a relevant Government policy on energy security published after the inspector's report and prior to the Board's decision. Additionally, the Board erroneously classified a consultation document as "national policy" and improperly considered it in its decision-making process.
