

How does heat dissipation and thermal control technology affect energy storage system?

Abstract: The heat dissipation and thermal control technology of the battery pack determine the safe and stable operation of the energy storage system. In this paper, the problem of ventilation and heat dissipation among the battery cell, battery pack and module is analyzed in detail, and its thermal control technology is described.

What is adsorption Heat storage?

Adsorption heat storages belong to the indirect TES class. Indeed, in this case, heat is employed to drive a desorption process, which means that energy is stored in the form of adsorption potential energy. In this way, heat is stored and conserved until the refrigerant fluid (adsorbate) is kept separate from the adsorbent.

What is thermal energy storage?

Figure 1. Thermal energy storage (TES) technologies . In a sensible heat storage, thermal energy is stored as a function of the temperature difference only. The amount of stored energy depends both on the specific heat and on the temperature difference between the charge and discharge phase. The heat storage media can be either liquid or solid.

What are the three main technologies for thermal energy storage?

The three main technologies for thermal energy storage are: sensible, latent and thermo-chemical heat storage, as shown in Figure 1. Figure 1. Thermal energy storage (TES) technologies . In a sensible heat storage, thermal energy is stored as a function of the temperature difference only.

What are the advantages and disadvantages of sensible heat storage?

The main advantages of sensible heat storages are related to the simple design, cost-effectiveness, and wide temperature range of applications. Nevertheless, they are characterized by low heat storage density and degradation of the stored energy due to heat dissipation through the environment.

What is latent heat technology storage?

In the latent heat technology storage, thermal energy is mainly stored by exploiting the latent heat of the phase transition of the heat storage medium.
