The Olynthian solar house design worked well in summer and winter. When the summer sun was almost directly overhead -- from about ten in the morning until two in the ...

Maximizing solar heat gain in winter and minimizing it in summer was a major consideration of the ancient Greek architect and builder when constructing a house.

OverviewPre-modern historyModern historyContemporary developments The passive solar design of buildings includes consideration of their orientation to the sun and their thermal mass, factors which have been incorporated to a greater or lesser extent in vernacular architecture for thousands of years. Ancient Greeks, Romans, and Chinese were the first to refine and develop the basic principles of passive solar design, but European technological advances were largely abandoned after the Fall of Rome. It was not until the 20th century that in...

Sellers in Greece Greek wholesalers and distributors of solar panels, components and complete PV kits. 28 sellers based in Greece are listed below.

Socrates realised that if houses were constructed with the sun in mind, they would be much warmer in winter and much cooler home in summer. He was so determined to put the ...
