Solar generators range in size from small generators for short camping trips to large off-grid power systems for a boat or house. Consequently, inverter sizes vary greatly. During our research, we discovered that most inverters range in size from 300 watts up to over 3000 watts. In this article, we guide you through the different inverter sizes.

How much power does a 12V inverter use?

For example: If you're running a 1500W inverter on your 12v battery with 1000 watts of total AC load. So your inverter will be consuming 83 amps (amps = watts/battery volts) from the battery for which you'll need a very thick cable. Using a thin cable in this scenario can damage the inverter or you'll not be able to run your load.

This guide explores the science behind calculating inverter capacity, providing practical formulas and expert tips to help you select the right inverter size for your home or office.
