What are the safety requirements related to batteries & Battery rooms?

Employers must consider exposure to these hazards when developing safe work practices and selecting personal protective equipment (PPE). That is where Article 320, Safety Requirements Related to Batteries and Battery Rooms comes in.

What is the maximum hydrogen concentration in a battery room?

To ensure safety, most regulations such as the Uniform Fire Code and the International Fire Code stipulate a maximum hydrogen concentration below the level of 1% or 25% of the lower explosion limit in a battery room. H = Hydrogen generated, in cubic feet per hour (ft³/hr).

What is the minimum illumination level in a battery room?

Illuminance levels in the battery room shall be designed to meet IESNA Lighting Handbook recommendations with a minimum illumination level of 300 lux (30 fc). The lighting design shall consider the type of battery rack and the physical battery configuration to ensure that all points of connection, maintenance and testing are adequately illuminated.
