

New Deal for Solar Panels

How can I save money on solar panels?

In every state in the USA, there are specific government solar programs designed to help you save money on solar panels. The most important solar incentive is the 30% federal solar tax credit, which is available to taxpayers across the country.

What solar incentives are available?

The most important solar incentive is the 30% federal solar tax credit, which is available to taxpayers across the country. There are also other solar incentives, rebates, and tax breaks available from utility companies or state and local governments. It can be hard to find solar incentives if you don't know what you're looking for.

How do government solar incentives work?

One of the most effective ways they do this is through government solar incentive programs. Solar incentives come in one of three major types: Tax breaks - Income tax credits are the most popular kinds of tax breaks, but state and local governments also commonly offer sales and property tax exemptions.

When did the solar panel tax credit start?

The solar panel tax credit actually originated during the oil crisis in 1978. It was then brought back in 2005 and, with some tweaks and changes, has persisted ever since. It's often referred to as the "Solar Investment Tax Credit" or ITC for short.

Are solar panels tax deductible?

People and businesses who purchase solar panels have long enjoyed tax credits that help ease the financial burden of going solar. Both the federal and state governments offer solar tax credits. All federal and state income tax credits can be claimed when filing taxes in the year after installation.

Are solar rebates a good idea?

Rebates are a great way to save money on solar panels. Solar rebates are often tied to a specific utility and paid directly to the solar installer to reduce the customer's up-front cost of going solar. This reduction in cost affects the amount of solar tax credits you can receive.
