

Off-grid and grid-connected hybrid inverter prices

What is the difference between hybrid and off-grid inverters?

The main difference between hybrid inverters and off-grid inverters is how they connect to the power grid. Hybrid inverters work with both your solar system and the grid, giving you more flexibility. If your solar panels produce more energy than you need, a hybrid inverter can send that extra energy back to the grid.

How much does an off-grid inverter cost?

So you can expect an off-grid inverter to be bigger than that of a hybrid system. Hybrid Inverters: can set you back anywhere from \$1,500 (small capacity inverters) to \$8,000 (larger capacity inverters). Off-Grid Inverters: an off-grid inverter will cost roughly \$1,500 (2.5kW) to \$8,000 (15kW).

What is a hybrid solar inverter?

A hybrid solar inverter is designed to give you flexibility. It connects to your solar panels, a battery system, and the power grid all at once. When your solar panels produce energy, the inverter powers your home and stores any extra energy in your batteries. If your batteries are full, it can send that extra energy back to the grid.

What is a grid-tied solar inverter?

Grid-tied solar inverters are generally simpler in design compared to off-grid or hybrid systems, primarily because they don't require battery storage systems. This simplicity translates into lower maintenance needs.

How does an off-grid inverter work?

An off-grid inverter will draw power from a charged battery, convert the power from DC to AC, and output it into a household. It is essentially similar to a hybrid inverter, with one major difference: it cannot feedback power into the utility grid. A diagram depicting how an off-grid inverter fits into a more extensive solar system.

How much does a hybrid inverter cost?

The effect of ambient temperatures on inverter output when considering a hybrid inverter vs. off-grid inverter. So you can expect an off-grid inverter to be bigger than that of a hybrid system. Hybrid Inverters: can set you back anywhere from \$1,500 (small capacity inverters) to \$8,000 (larger capacity inverters).
