

Photovoltaic energy storage frequency modulation project

Is a frequency modulation control strategy suitable for PV-energy storage systems?

In response to the shortcomings of the classic VSG control strategy mentioned above, this paper proposes a frequency modulation control strategy with additional system active power constraints for PV-energy storage systems (hereinafter referred to as active power constraint control strategy).

What is a frequency modulation control strategy for VSG systems?

A frequency modulation control strategy for VSG systems with additional active power constraints is proposed by overlaying the active power changes of photovoltaic and energy storage systems through appropriate functional relationships into the control loop of synchronous generators.

Can VSG control improve frequency response characteristics of photovoltaic and energy storage systems?

This work was supported by the New Power System Major Science and Technology Research Project of State Grid Hebei Electric Power Company Ltd. (kj2022-058) (Research on control strategy for improving the frequency response characteristics of photovoltaic and energy storage systems based on VSG control).

What is dynamic frequency modulation model?

The dynamic frequency modulation model of the whole regional power grid is composed of thermal power units, energy storage systems, nonlinear frequency difference signal decomposition, fire-storage cooperative fuzzy control power distribution, energy storage system output control and other components. Can battery energy storage improve frequency modulation of thermal power units?

Li Cuiping et al. used a battery energy storage system to assist in the frequency modulation of thermal power units, significantly improving the frequency modulation effect, smoothing the unit output power and reducing unit wear.

What is the frequency modulation of hybrid energy storage?

Under the four control strategies of A, B, C and D, the hybrid energy storage participating in the primary frequency modulation of the unit Δf_m is 0.00194 p.u.Hz, excluding the energy storage system when the frequency modulation Δf_m is 0.00316 p.u.Hz, compared to a decrease of 37.61 %.
