

Voltage-source inverter in frequency converter

The voltage source inverter topology uses a diode rectifier that converts utility/line AC voltage (60 Hz) to DC. The converter is not controlled through electronic firing like the CSI drive.

The voltage source inverter (VSI) and the current source inverter (CSI) are two different types of inverters. Both of them are used for conversion from DC to AC.

Common types of frequency converters include Voltage Source Inverter (VSI), Current Source Inverter (CSI), etc. Different types have their own unique circuit design and ...
